40 years of electrical expertise at your service

E.Bennett (Electrical) Company has more than 40 years experience of building, supplying, repairing and maintaining electric motors, drives and controls.

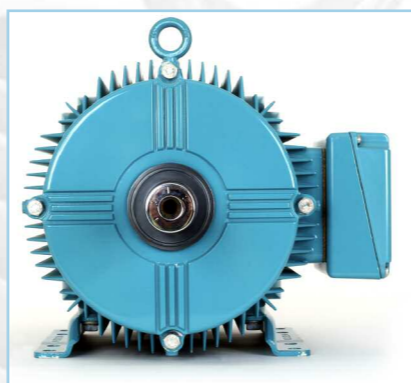

We are proud of the reputation we have gained for supplying quality goods and reliable services at competitive prices, and our central location means we are within easy reach of customers throughout the UK.

Our stores carry extensive stocks of motors, inverters, gearboxes and control gear, and we aim to offer a speedy solution when a problem occurs. We keep large stocks in our warehouse and also maintain replacement stocks at customers' premises - everything from standard products to specialist items to satisfy their particular requirements.

Electric motors, gearmotors, AC variable drives & industrial controls

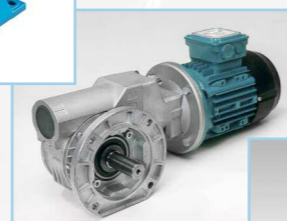

Thousands of products and spare parts are available direct from our warehouse. We are official distributors and suppliers for leading manufacturers including Baldor, Brook Crompton, Danfoss, Gamak, Hansen Transmissions, Remco and WEG.

performance of AC motors. Combined with geared motors, variable frequency drives enable unsurpassed efficiency and energy savings.

Industrial controls – from solenoid valves to DC injection brakes

We supply the complete ranges of Crompton Controls and Danfoss industrial controls. Whether you need motor starters, motor control gear, control panels, surface mounted starters, flush mounted starters, solenoid valves, pressure/temperature transmitters, or DC injection brakes, we can help you. We will recommend, supply, fit and maintain the best industrial control solution for your needs.

Shipped from 22 UK distribution centres to locations around the world

Our stock is held in 22 locations around the UK, ready for supply to your premises, and includes both standard and special items for your niche requirements. All models can be shipped to anywhere in the UK mainland, Ireland, the Channel Isles and worldwide.

All leading makes of electric motors

We supply all leading makes of electric motor and gearmotor, including Gamak, Remco and WEG. We offer both standard and special items to suit your requirements.

Hansen, Rexnord, ElectroPower and Hydromech geared motors

We hold a broad stock of Hansen, Rexnord, ElectroPower and Hydromech gearmotors – some of these are pre-assembled units to which we add a motor in order to provide a gearbox that meets customers' exact requirements. This gives us greater flexibility we can build multiple versions from the base stock – the gearbox you order will have been assembled to your precise specifications.

Electronic drives for motor control and energy savings

Danfoss VLT electronic drives control speed, torque, acceleration, synchronization, positioning and overall

Electrical consultancy and energy saving services

We offer advice on energy saving for Climate Change Levy (CCL) and Enhanced Capital Allowance (ECA) on all our EFF1 drives and pumps. Electric motors and drives often account for a major proportion of an industrial site's energy consumption.

By using more efficient units and control mechanisms you can reduce your energy use. This can also reduce your maintenance and replacement costs, as efficiently-run equipment will usually have a longer life.

Massive cost savings

If you have any centrifugal drives or pumps then nine times out of ten we can help you trim the speed down from standard frequency of 50Hz to an energy-saving rate of 40Hz. By reducing speed you can achieve major cost savings.

Up to 50% energy savings

Even if there are no dampers or valves we can trim speeds down. A frequency inverter will typically effect a 20% reduction from 50Hz to 40Hz. This delivers a 50% energy saving, with resultant cost savings.

On-site visit

Our highly trained electrical engineers can visit and inspect your installations. We will then give you a detailed indication of whether savings are achievable.

Industrial maintenance contracts, tailored to suit your requirements

Save money and gain control with an industrial maintenance contract from E.Bennett Electrical.

An industrial maintenance contract gives you a dedicated team of engineers you can contact directly 24 hours a day, 365 days a year.

Your contract will be tailored to fit your needs and provide the most suitable and cost-effective cover possible.

The advantages are clear:

- 24/7/365 access to specialist engineers
- Regular maintenance visits to your site
- Consultancy and advice services
- Service pack tailored to your needs
- On-site stock of replacement electric motors, drives and controls
- Fast turnaround for motor repairs
- Tailor-made service level agreement (SLA)
